DataSnipper — Recruitment

Re: Forward Deployed Engineer — Amsterdam

Tilburg, 14 September 2026

You ask for someone comfortable using tools like Claude in the build and test loop, who can decompose a customer workflow into agents and decide quickly what is feasible. That is how I already work: agentic tooling is my delivery method, not something I am evaluating. I am applying knowing I do not come from audit, and that your must-have allows strong interest and the ability to learn it. My degree is economics, so financial documents and the logic underneath them are familiar ground, and I would rather be honest about the starting point than oversell it.

What I bring is the building. I solo-built Citania, a multi-tenant SaaS of roughly 80,000 lines of production TypeScript on PostgreSQL, with 294 automated tests and contract-first schemas. At Netvice, a Dutch contact-centre company, I combined throughput and quality data into a single index that operations tracked as part of their daily routine, and I wrote and maintained the SQL pipelines behind the operational reporting. I also built a forecasting model that converts planned volume into the staffing required on any future day, 500+ days ahead. Taking a workflow apart, deciding what is worth automating and what is not, and then shipping the thing that does it, is work I have actually done rather than read about.

Your nice-to-have list mentions evals and AI observability, and that is the part I care most about. On Alpha Scout, my football player-valuation platform, I audited my own backtest and found a stale price in a denominator and a date leak in calendar-year leagues. The headline I had published did not survive: an apparent multiple advantage of 3.48x against 2.80x collapsed to 1.17x against 1.08x, and I replaced it with the smaller true result. The platform publishes the segments where my signal adds nothing over the base rate, in those words. In front of a customer, a confident wrong answer is the failure that costs you the relationship, so knowing whether the thing actually works is not a nice-to-have to me.

Straight about the gaps: no audit background, and my SQL is working knowledge rather than deep. On right to work, I am legally resident in Tilburg and free to work in the Netherlands now; I also meet the conditions for Dutch citizenship and have been put forward for it, with the ceremony expected over the coming months. I am available immediately. I would be glad to talk.
