Aircall — Recruitment

Re: Customer Engineer — Iberia & Italy, Madrid

Tilburg, 15 September 2026

I spent the last year at Netvice, a Dutch contact-centre company, as the analyst the operations team came to when a workflow question needed a definition. That is the room Aircall gets sold into, and I have been in it from the customer's side of the desk.

What makes Aircall worth anything to a customer is almost entirely what it is connected to — the CRM, the webhooks, the calls that fire when a conversation ends. Onboarding someone means getting that surface right on their stack, and building that surface is what I have actually done. Citania is my own company and my own product: a multi-tenant SaaS on PostgreSQL with 294 automated tests and contract-first OpenAPI schemas, which I built alone and still run, currently pre-launch. Nobody else has touched it, so the integrations there are mine to explain.

You ask for three years in a customer-facing technical role and I have one. What sits next to that is native Spanish, a year inside a contact-centre operation, and integration work you can open and read.

One thing about how I work. On Alpha Scout, my football player-valuation platform, I audited my own backtest and found a stale price in a denominator and a date leak. The edge I had published did not survive the fix: 3.48x became 1.17x, which is noise. I replaced the headline with the smaller true one. I would rather tell a customer the smaller number myself.

Citania and Alpha Scout are both at franciscorau.com. On timing and right to work: I am relocating to Madrid and can be there from January, earlier if it suits you — the Dutch immigration service has confirmed I meet the conditions for citizenship and put me forward for it, and from the ceremony I am an EU citizen with an unrestricted right to work in Spain.
