Football Radar — Recruitment
Re: Club Data Scientist (Junior)

Tilburg, 7 September 2026

I applied for the Club Data Scientist role. My qualification is a platform, not a promise: Alpha Scout values 23,353 players across 155 leagues with calibrated 12-month probabilities (isotonic, rolling out-of-sample, AUC 0.87-0.92 on 62,035 held-out cases) and a forward-tested scouting signal - flagged-undervalued players were signed 1.7x more often than peers, ranked before the window opened. Live demo: alphascout.pages.dev; the football hub is franciscorau.com/futbol.

The part of my work most relevant to Football Radar: the audit culture. An earlier version of my backtest claimed 3x; my own look-ahead audit cut it to 1.7x, and a candidate data provider was dropped when forward testing showed no gain. I would rather ship a narrower number that survives scrutiny - which I understand is rather the point of modelling football professionally.

Economist + MSc Data Science (Tilburg), production Python/SQL, based in the Netherlands and ready to relocate to London for this.
