Mustard Systems — Recruitment

Re: Sports Quantitative Analyst (Graduate)

Tilburg, 7 September 2026

I applied for the graduate Sports Quantitative Analyst role. I build sports models already: a player-valuation platform with calibrated probabilities (gradient boosting + isotonic calibration, rolling out-of-sample validation, AUC 0.87-0.92 across 62,035 held-out cases, Brier skill +0.30 to +0.49) and a forward-tested transfer signal. Live demo: alphascout.pages.dev.

What I think matters most for a quant seat: I audit my own results. A 3x backtest claim of mine died under my own look-ahead audit and became an honest 1.7x; a data provider was dropped for adding no out-of-sample IC. I also ran a weather prediction-market research system end to end and published the honest null result.

Economist + MSc Data Science (Tilburg). Python/SQL production experience. Ready to relocate to London.
