Destinus — Recruitment

Re: Commercial Intelligence Analyst — Valkenburg

Tilburg, 20 August 2026

Building the structure behind commercial intelligence — the reporting frameworks, the tracking, the insight that reaches a decision — is the work I keep choosing on my own initiative. The clearest example: I ran an end-to-end market study of 10,605 businesses in Mexico City measuring adoption of online booking, using 722 structured queries, deduplication, two independent detection methods and public-registry enrichment. It produced a measured 6.9% adoption rate and a 9,878-row qualified dataset with a dashboard on top. Nobody asked me to do it; I wanted to know the answer, and the method had to be good enough to trust it.

Professionally, at Netvice I was the person who made performance legible. I defined the KPIs for a live operation across several domains with their own owners and targets, chose the sources, reconciled systems that disagreed with each other, and built the reporting people actually steered by — including a forecasting model that projected capacity needs 500+ days ahead. Bringing structure to complexity and challenging the assumptions underneath a number is the part of the job I like most.

Against your requirements: MSc and BSc as asked, strong Excel, and hands-on KPI-dashboard and management-reporting experience. SQL and BI tooling I use, though my dashboards were custom-built in code rather than in a standard BI suite. You ask for two years and I have one — I would rather say that plainly than let you find it on the CV. What I bring instead is unusual ownership: every system I have mentioned began as my own proposal and ended in production use.

Valkenburg is workable from Tilburg, and an international, fast-moving environment suits me — I work in English and Spanish daily. Everything above is live and clickable at franciscorau.com; I would gladly walk you through the market study or the KPI work.
