Zscaler — Recruitment

Re: Solutions Consultant — Remote, Spain

Tilburg, 15 September 2026

I am a native Spanish speaker who works in English every day, I build with AI tooling rather than reading about it, and the part of technical work I actually want is being in the room with the customer. That combination is why I am writing about a solutions role in Spain rather than an engineering seat somewhere else.

On the AI side of your minimum qualifications: agentic tooling is how I deliver. I designed, directed and tested Citania on my own — a multi-tenant booking platform on PostgreSQL with 294 automated tests, still pre-launch — and Alpha Scout, a live football player-valuation platform that runs from scraping and entity resolution through to calibrated probabilities. Both are at franciscorau.com. Before those, a year as Data & Process Analyst at Netvice, a Dutch contact-centre company, turning operational data into production decision tooling, working directly with operational staff to turn their questions into definitions precise enough to hold up.

Where I am honest about the gap: my networking fundamentals are uneven. HTTP and DNS I know from building and deploying my own systems; TCP/IP internals and secure tunnelling I would be learning properly, not brushing up. I flag it because a solutions consultant who bluffs a protocol in front of a customer is worth less than one who says what he does not know and comes back with the answer.

The habit I would bring instead: on Alpha Scout I audited my own backtest and found a stale price in a denominator and a date leak. The multiple advantage I had published, 3.48x for my picks, did not survive — measured against the right price it is 1.17x, which is noise. I replaced the headline with the smaller true one. In front of a customer a confident wrong answer costs more than an admitted gap. Available immediately.
