Summary

Analyst-engineer with an MSc in Data Science & Society and a BSc in Economics (Tilburg University). A year as Data & Process Analyst at Netvice, where I designed a percentile-based performance metric that scores results against the distribution of each workload, so people doing different work stay comparable, and built the reporting underneath it. Deciding what should be measured, and then defending the definition, is the part of analytics I am actually good at. I also built Alpha Scout, a live player-valuation platform, end to end. Everything below is live at franciscorau.com.

Skills

Analysis: metric definition, forecasting, statistical validation, evaluation design, causal thinking

Code: Python (pandas, scikit-learn), SQL, PostgreSQL, TypeScript/React

AI: agentic delivery (Claude Code, Replit), LLM workflows applied to real product problems

Languages: Spanish (native), English (fluent), Dutch (A2, actively learning)

Experience

Data & Process Analyst — Netvice

May 2025 – Aug 2026 · Tilburg, Netherlands

- Performance analytics: a percentile-based pacing metric designed to stay comparable across workloads with very different volumes and difficulty, combined with outcomes into a single performance index used in operational reporting.
- Several of the systems below were ones I proposed myself — need identified, pitched, built, and shipped end to end.
- Forecasting model (the centerpiece): translates planned workload into the staffing required on any future day — a cohort-based simulation that put demand 500+ days ahead, far beyond the scheduling horizon, with bottleneck detection.
- Real-time operations reporting: live dashboards for daily coverage and planning, plus recurring daily reports used by operations.
- Built with agentic AI as my delivery method — delivered end to end as a single analyst: design, build, and shipping of production tooling.
- Progressed from data intern to Data & Process Analyst within the year, moving from reporting work to company-level strategic projects.
- Owned operational BI end to end — from roadmap and data model to reporting used daily by operations.
- Built everything configurable rather than hard-coded, so the tooling keeps working as workloads and staffing change.

Student Researcher — Philips

Sep 2022 – Dec 2022 · Eindhoven, Netherlands

- Researched OneBlade market penetration among students; built linear models estimating adoption of a blade-subscription service across student segments.

Data Entry — Von der Heide

Jan 2019 – Aug 2019 · Mexico City, Mexico

- Cleaned and migrated the company database to a new CRM system, safeguarding data integrity throughout the transfer.

Selected Projects

Market-Gap Analysis: Online-Booking Adoption in Mexico City

2019 · Google Places API, headless browser, Streamlit

- End-to-end data pipeline measuring online-booking adoption across 10,605 businesses: 722 structured API queries, deduplication, two independent booking detectors, and public-registry enrichment. Measured 6.9% adoption; delivered a 9,878-row qualified dataset (89% with direct contact details) as a workbook and dashboard.

Weather Prediction-Market Research

2026 · Python, probability calibration, market microstructure

- Tested whether prediction markets price official weather observations efficiently: implied-probability extraction from order books, no-arbitrage coherence checks, repricing-latency measurement. Documented an honest null result.

Citania — Booking & Payments Platform

2025–2026 · TypeScript, PostgreSQL, React Native

- Solo-built multi-tenant booking and payments SaaS: 100+ integration tests, database-level slot exclusivity, two-way Google Calendar sync.

Football Player Value Modelling

2024 · Python, statistical modelling

- Predicted market values on a multi-year, multi-competition dataset compiled myself.

Education

MSc Data Science & Society (Business Track) — Tilburg University

2023 – 2024

BSc Economics — Tilburg University

2020 – 2023
