## Process Excellence — procesarcheoloog, AI-native, bouwt wat hij aanbeveelt

+31 6 38859519 | franciscorau08@gmail.com | franciscorau.com | linkedin.com/in/francisco-rau | Tilburg, NL

### Summary

---

Economist (BSc Economics + MSc Data Science & Society, Tilburg) whose specialty is exactly this role's thesis: processes only get better once you dig out how they actually run. At a Dutch contact centre I excavated two disconnected operational systems, reconciled them into one trustworthy picture, and then redesigned the processes around automation that worked in production — forecasting, performance analytics, real-time tooling the floor used daily. AI-native by default: agentic AI is how I ship, including a production SaaS built solo. Data-driven without needing to be the data scientist; equally at home with engineers and operational teams. Dutch: A2 and actively learning; English fluent.

### Skills

---

Process analysis & redesign (messy-first: reconciliation, root cause)  
AI & agentic automation in production (daily practice)  
Data-driven recommendation building (economics training)  
Stakeholder range: engineers ↔ operations ↔ commercial  
Building the fix: TypeScript, React, APIs, PostgreSQL  
Structured delivery in ambiguity (founder, Citania)  
English (fluent) · Spanish (native) · Dutch (A2, learning)

### Experience

---

#### Data & Process Analyst — Netvice

May 2025 – Present · Tilburg, Netherlands

- Established operational BI as a new, self-owned workstream — a first in the company's ten-year history — with full ownership from roadmap to daily use on the call-center floor.
- Fully self-directed: each of the systems below began as my own proposal — need identified, pitched, built, and shipped at pace.
- Introduced agentic AI development (Replit, Claude Code) as a delivery method — an early bet that let one analyst design, build, and ship production tooling end to end.
- Real-time operations layer: live dashboards wired to telephony webhooks (agent line state, idle detection, coverage views), plus a Daily Agent Planner, agent day reports, and a finance board (pilot).
- Grew from data intern to Data & Process Analyst, working with increasingly senior stakeholders — ultimately on strategic projects directly with the company's founder.
- Forecasting model (the centerpiece): turns planned mailing volume into the exact number of agents needed on any future day — a cohort-based simulation of call attempts, pickup decay, and callback flows. Because it runs off the mailing calendar, agent demand is known 500+ days ahead, far beyond the notice period scheduling requires. Includes capacity-choke detection and a batch-splitting optimizer.
- Performance analytics: a percentile-based hourly pacing metric that makes agents comparable across campaigns with very different call lengths and success rates, combined with outcomes into a single performance index powering real-time TV rankings on the floor.
- Built everything configurable rather than hard-coded, so the tooling keeps working as campaigns and staff change.

#### Student Researcher — Philips

Sep 2022 – Dec 2022 · Eindhoven, Netherlands

- Researched OneBlade market penetration among students; built linear models estimating adoption of a blade-subscription service across student segments.

#### Data Entry — Von der Heide

Jan 2019 – Aug 2019 · Mexico City, Mexico

- Cleaned and migrated the company database to a new CRM system, safeguarding data integrity throughout the transfer.

## Selected Projects

---

### Market-Gap Analysis: Online-Booking Adoption in Mexico City

- End-to-end data pipeline measuring online-booking adoption across 10,605 businesses: 722 structured API queries, deduplication, two independent booking detectors, and public-registry enrichment. Measured 6.9% adoption; delivered a 9,878-row qualified dataset (89% with direct contact details) as a workbook and dashboard.

### Weather Prediction-Market Research

2026 · Python, probability calibration, market microstructure

- Tested whether prediction markets price official weather observations efficiently: implied-probability extraction from order books, no-arbitrage coherence checks, repricing-latency measurement. Documented an honest null result.

### Citania — Booking & Payments Platform

2025–2026 · TypeScript, PostgreSQL, React Native

- Solo-built multi-tenant booking and payments SaaS: 100+ integration tests, database-level slot exclusivity, two-way Google Calendar sync. Live in production.

### Football Player Value Modelling

2024 · Python, statistical modelling

- Predicted market values on a multi-year, 100+ competition dataset compiled myself. Best model:  $R^2 = 0.921$ , RMSE \$2.23M.

## Education

---

### MSc Data Science & Society (Business Track) — Tilburg University

2023 – 2024

### BSc Economics — Tilburg University

2020 – 2023

## Languages

---

English (native), Spanish (native), Dutch (A2, actively learning)
