

Francisco Rau

Finance Business Analyst

+31 6 38859519 | franciscorau08@gmail.com | franciscorau.com | linkedin.com/in/francisco-rau | Tilburg, NL

Summary

Analyst (MSc Data Science & Society, BSc Economics — Tilburg) bridging finance and data: forecasting, variance-ready KPI design and reporting built at Netvice and used daily by operations. Economics degree for the finance half, production BI for the data half. Portfolio live at franciscorau.com.

Skills

Data & BI: Python (pandas, scikit-learn), SQL (PostgreSQL), Excel, dashboarding (Streamlit, custom React), ETL & data quality

Modelling: forecasting, regression, gradient boosting, probability calibration, out-of-sample validation

Ways of working: stakeholder requirements, KPI definition, self-directed delivery, AI/agent dev tooling

Experience

Data & Process Analyst — Netvice

May 2025 – Jul 2026 · Tilburg, Netherlands

- Grew from data intern to Data & Process Analyst, working with increasingly senior stakeholders — ultimately on strategic projects directly with the company's founder.
- Established operational BI as a new, self-owned workstream — a first in the company's ten-year history — with full ownership from roadmap to daily use on the call-center floor.
- Fully self-directed: each of the systems below began as my own proposal — need identified, pitched, built, and shipped at pace.
- Forecasting model (the centerpiece): turns planned mailing volume into the exact number of agents needed on any future day — a cohort-based simulation of call attempts, pickup decay, and callback flows. Because it runs off the mailing calendar, agent demand is known 500+ days ahead, far beyond the notice period scheduling requires. Includes capacity-choke detection and a batch-splitting optimizer.
- Performance analytics: a percentile-based hourly pacing metric that makes agents comparable across campaigns with very different call lengths and success rates, combined with outcomes into a single performance index powering real-time TV rankings on the floor.
- Real-time operations layer: live dashboards wired to telephony webhooks (agent line state, idle detection, coverage views), plus a Daily Agent Planner, agent day reports, and a finance board (pilot).
- Introduced agentic AI development (Replit, Claude Code) as a delivery method — an early bet that let one analyst design, build, and ship production tooling end to end.
- Built everything configurable rather than hard-coded, so the tooling keeps working as campaigns and staff change.

Student Researcher — Philips

Sep 2022 – Dec 2022 · Eindhoven, Netherlands

- Researched OneBlade market penetration among students; built linear models estimating adoption of a blade-subscription service across student segments.

Data Entry — Von der Heide

Jan 2019 – Aug 2019 · Mexico City, Mexico

- Cleaned and migrated the company database to a new CRM system, safeguarding data integrity throughout the transfer.

Selected Projects

Market-Gap Analysis: Online-Booking Adoption in Mexico City

2024, Google Places API, headless browser, Streamlit

- End-to-end data pipeline measuring online-booking adoption across 10,605 businesses: 722 structured API queries, deduplication, two independent booking detectors, and public-registry enrichment. Measured 6.9% adoption; delivered a 9,878-row qualified dataset (89% with direct contact details) as a workbook and dashboard.

- Weather Prediction-Market Research**

2026 · Python, probability calibration, market microstructure
- Tested whether prediction markets price official weather observations efficiently: implied-probability extraction from order books, no-arbitrage coherence checks, repricing-latency measurement. Documented an honest null result.
- Citania — Booking & Payments Platform**

2025–2026 · TypeScript, PostgreSQL, React Native
- Solo-built multi-tenant booking and payments SaaS: 100+ integration tests, database-level slot exclusivity, two-way Google Calendar sync. Live in production.
- Football Player Value Modelling**

2024 · Python, statistical modelling
- Predicted market values on a multi-year, 100+ competition dataset compiled myself. Best model: $R^2 = 0.921$, RMSE \$2.23M.

Education

- MSc Data Science & Society (Business Track) — Tilburg University**

2023 – 2024
- BSc Economics — Tilburg University**

2020 – 2023
