Basic-Fit — Recruitment

Re: Business Solutions Engineer — Hoofddorp

Tilburg, 10 August 2026

Your ad reads like a description of how I already work. At Netvice, a Tilburg call-center company, I was the person who got to the root of how processes really ran, then designed and built the internal systems to fix them — a Daily Agent Planner, real-time coverage dashboards wired to telephony webhooks, and a forecasting model that plans agent capacity 500+ days ahead. Every one of them started as my own proposal and went from idea to daily production use on the floor.

The stack matches too. I build on PostgreSQL with my own data models, TypeScript/JavaScript, and REST integrations — and I work AI-native: Claude Code and agentic tooling are my daily delivery method, which is exactly how one builder ships reliable systems end to end at speed. My solo-built SaaS, Citania (booking and payments, multi-tenant, 294 automated tests, database-level booking exclusivity), shows the beyond-the-happy-path habits your ad asks for: permissions, validation, and edge cases designed in from the start.

Honest notes: I have one year of professional experience, and my Dutch is A2 and improving — my working language is English. I hold a kennismigrant-eligible profile and Basic Fit International B.V. is a recognised sponsor. Everything I've built is live and clickable at franciscorau.com; I'd gladly walk through any of it in a conversation.

Ik verheug me erop kennis te maken — en ik doe mijn best om dat gesprek deels in het Nederlands te voeren.
