CIMSOLUTIONS — Recruitment

Re: Data Analyst / BI Specialist

Tilburg, 10 August 2026

At Netvice, a Tilburg call-center company, I built the operational BI environment from zero: I defined the KPIs, built the real-time dashboards the floor runs on every day, and developed a forecasting model that turns the mailing calendar into exact agent-capacity needs 500+ days ahead. That workstream did not exist before me — I proposed it, built it, and got it adopted, working directly with stakeholders up to the founder. Turning data into decisions people actually take is precisely the work your vacancy describes.

Two honest notes on your requirements. First, the ad asks for four years of experience; I have one professional year — but in that year I shipped a complete BI suite end to end, and my portfolio (franciscorau.com) shows every system live. Second, I build dashboards directly in code (React/TypeScript on PostgreSQL) rather than in Power BI or Tableau; the underlying craft — data modelling, KPI definition, visual design that makes people act — is the same, and I pick up new tools quickly.

My background combines economics (BSc) with data science (MSc, Tilburg University), which fits the policy-and-process questions your clients like the Belastingdienst and Gemeente Den Haag deal with. My Dutch is at A2 and improving with active study; my working languages today are English and Spanish. I hold a kennismigrant-eligible profile and CIMSOLUTIONS is a recognised sponsor, which makes the practical side straightforward.

I would gladly show the forecasting model and the dashboard suite in a conversation — at your head office, a local branch, or online.

Ik verheug me erop kennis te maken — en ik doe mijn best om dat gesprek deels in het Nederlands te voeren.
