Transavia — Recruitment

Re: Data Analyst Operations — Hoofddorp

Tilburg, 20 August 2026

Your vacancy describes limiting the impact of disruptions on the operation and on passengers, and owning the KPIs of your domain until you are the expert on them. That is the job I already did, in a different industry. At Netvice, a Dutch contact centre, the operation ran across scheduling, staffing, live coverage and campaign performance — each with its own owners and targets — and I built the analytics layer that tied them together: I defined the KPIs, chose the sources, and built the dashboards the floor steered by every day.

The piece closest to your world is the forecasting model. It turns the planned volume calendar into the exact headcount needed on any future day, 500+ days ahead, as a cohort simulation of attempts, decay and callback flows — with capacity-choke detection and an optimiser that re-splits batches around the chokes. In other words: seeing where the operation will break before it breaks, and giving planners something to act on. I also built a percentile-based performance index so people working very different workloads could be compared fairly, which is the same normalisation problem as comparing performance across operational domains.

Honest notes on fit. I have one year of professional experience, so I would be growing into the expert role your ad describes rather than arriving as it. My dashboards were custom-built in code on PostgreSQL rather than in a standard BI suite — the craft of data modelling, KPI definition and visual clarity transfers directly, and I pick up tooling quickly. Aviation would be a new domain for me; operational analytics would not.

On language: my working language is English and my Dutch is A2 and actively improving — I read Dutch documentation and ads like this one without trouble, and I noticed you offer Dutch language training, which I would take up gladly. Hoofddorp is a straightforward move for me. Everything I have described is live and clickable at franciscorau.com; I would happily walk your team through the forecasting model.
