Summary

Analyst-engineer with an MSc in Data Science & Society and a BSc in Economics (Tilburg University). A year as Data & Process Analyst at Netvice, where I designed a percentile-based performance metric that scores results against the distribution of each workload, and built the reporting underneath it. Economics is why measuring whether an initiative actually moved anything, rather than whether it shipped, is the part I care about. I also built Alpha Scout, a live player-valuation platform, end to end. Everything below is live at franciscorau.com.

Skills

Analysis: experiment design, forecasting, metric design, statistical validation, causal thinking

Code: Python (pandas, scikit-learn), SQL, PostgreSQL, TypeScript/React

AI: agentic delivery (Claude Code, Replit), LLM workflows, evaluation design

Languages: Spanish (native), English (fluent), Dutch (A2, actively learning)

Experience

Data & Process Analyst — Netvice

May 2025 – Aug 2026 · Tilburg, Netherlands

- Performance analytics: a percentile-based pacing metric designed to stay comparable across workloads with very different volumes and difficulty, combined with outcomes into a single performance index used in operational reporting.
- Forecasting model (the centerpiece): translates planned workload into the staffing required on any future day — a cohort-based simulation that put demand 500+ days ahead, far beyond the scheduling horizon, with bottleneck detection.
- Progressed from data intern to Data & Process Analyst within the year, moving from reporting work to company-level strategic projects.
- Real-time operations reporting: live dashboards for daily coverage and planning, plus recurring daily reports used by operations.
- Several of the systems below were ones I proposed myself — need identified, pitched, built, and shipped end to end.
- Built with agentic AI as my delivery method — delivered end to end as a single analyst: design, build, and shipping of production tooling.
- Owned operational BI end to end — from roadmap and data model to reporting used daily by operations.
- Built everything configurable rather than hard-coded, so the tooling keeps working as workloads and staffing change.

Student Researcher — Philips

Sep 2022 – Dec 2022 · Eindhoven, Netherlands

- Researched OneBlade market penetration among students; built linear models estimating adoption of a blade-subscription service across student segments.

Data Entry — Von der Heide

Jan 2019 – Aug 2019 · Mexico City, Mexico

- Cleaned and migrated the company database to a new CRM system, safeguarding data integrity throughout the transfer.

Selected Projects

Market-Gap Analysis: Online-Booking Adoption in Mexico City

2024 · Google Places API, headless browser, Streamlit

- End-to-end data pipeline measuring online-booking adoption across 10,605 businesses: 722 structured API queries, deduplication, two independent booking detectors, and public-registry enrichment. Measured 6.9% adoption; delivered a 9,878-row qualified dataset (89% with direct contact details) as a workbook and dashboard.

- Weather Prediction-Market Research**

2026 · Python, probability calibration, market microstructure
- Tested whether prediction markets price official weather observations efficiently: implied-probability extraction from order books, no-arbitrage coherence checks, repricing-latency measurement. Documented an honest null result.
- Citania — Booking & Payments Platform**

2025–2026 · TypeScript, PostgreSQL, React Native
- Solo-built multi-tenant booking and payments SaaS: 100+ integration tests, database-level slot exclusivity, two-way Google Calendar sync.
- Football Player Value Modelling**

2024 · Python, statistical modelling
- Predicted market values on a multi-year, multi-competition dataset compiled myself.

Education

- MSc Data Science & Society (Business Track) — Tilburg University**

2023 – 2024
- BSc Economics — Tilburg University**

2020 – 2023
