

Francisco Rau

Data & AI Analyst · Agentic-AI Builder

+31 6 38859519 | franciscorau08@gmail.com | franciscorau.com | linkedin.com/in/francisco-rau | Tilburg, NL

Summary

I build working software with agentic AI — daily, for over a year, in production. At Netvice I introduced agentic AI development (Claude Code, Replit) as the delivery method and used it to design, build and ship a complete BI suite of my own as one analyst: capacity forecasting, performance analytics, and a real-time floor wallboard. On my own time I shipped Citania, a live multi-tenant booking-and-payments SaaS. An MSc in Data Science and a BSc in Economics (Tilburg University) supply the judgment layer AI doesn't have: what to build, which metric is fair, and what it costs. Everything below is live and clickable at franciscorau.com.

Skills

Agentic-AI delivery: Claude Code, Replit — prompt-driven development from prototype to production; LLM workflow design

Languages & tools: TypeScript, React, React Native (Expo), Node/Express, PostgreSQL, REST APIs, Git, Vitest, AI/agentic dev tooling, Excel

Methods: forecasting, statistical analysis, econometrics, ETL & API integration, data visualization

Domains: business intelligence, operational analytics, capacity planning, unit economics

Experience

Data & Process Analyst — Netvice

May 2025 – Present · Tilburg, NL

- Grew from data intern to Data & Process Analyst, working with increasingly senior stakeholders — ultimately on strategic projects directly with the company's founder.
- Established operational BI as a new, self-owned workstream — a first in the company's ten-year history — with full ownership from roadmap to daily production use.
- Fully self-directed: each of the systems below began as my own proposal — need identified, pitched, built, and shipped at pace.
- Introduced agentic AI development (Replit, Claude Code) as the delivery method — an early bet that let one analyst design, build, and ship a complete BI suite end to end for a high-volume inbound/outbound call center.
- Forecasting model (the centerpiece): turns planned mailing volume into the exact number of agents needed on any future day — a cohort-based simulation of call attempts, pickup decay, and callback flows. Agent demand known 500+ days ahead; includes capacity-choke detection and a batch-splitting optimizer.
- Performance analytics: a percentile-based hourly pacing metric that makes agents comparable across campaigns with very different call lengths and success rates, combined with outcomes into a single performance index powering real-time TV rankings on the floor.
- Real-time operations layer: live dashboards wired to telephony webhooks (agent line state, idle detection, coverage views), plus a Daily Agent Planner, agent day reports, and a finance board (pilot).
- Built everything configurable rather than hard-coded, so the tooling keeps working as campaigns and staff change.

Student Researcher — Philips

Sep 2022 – Dec 2022 · Eindhoven, NL

- Researched OneBlade market penetration among students; built linear models estimating adoption of a blade-subscription service across student segments.

Data Entry — Von der Heide

Jan 2019 – Aug 2019 · Mexico City, MX

- Cleaned and migrated the company database to a new CRM system, safeguarding data integrity throughout the transfer.

Selected Projects

Citania — Booking & Payments SaaS (live in production) — 2026 · TypeScript, PostgreSQL, OpenAPI, React

- Solo-built multi-tenant booking-and-payments platform for Latin America, built end to end with agentic AI

tooling: contract-first OpenAPI, React web app and Expo React Native mobile app, 100+ integration tests, database-level slot exclusivity, two-way Google Calendar sync, and a full owner dashboard (calendar, shifts, services, team, inventory, reports).

Contact-Centre BI Suite — four working tools

2026 · web · all data fictional

- Live, clickable recreations of the BI stack I built: a campaign staffing simulator, a daily agent report with 70th-percentile frontier benchmarking, a real-time supervisor TV wallboard, and a unit-economics P&L model (own concept design). All at franciscorau.com.

Market-Gap Analysis: Online-Booking Adoption in Mexico City

2026 · Python, Google Places API

- End-to-end pipeline measuring booking adoption across 10,605 businesses: 722 structured queries, dual independent detection, public-registry enrichment, resumable 15-hour runs. Result: 6.9% adoption, a 9,878-row qualified dataset.

Weather Prediction-Market Research

2026 · Python, market microstructure

- Research system testing whether prediction markets price weather observations efficiently: implied-probability extraction, no-arbitrage coherence checks, repricing-latency measurement. Documented an honest null result — edges did not survive fees.

Alpha Scout — Football Scouting & Valuation (beta)

2024–2026 · Python, statsmodels, Cloudflare

- Solo-built: 23,445 players, 155 leagues, agentic harvesting pipeline, fair-value model ($R^2 = 0.74$ live) with a public per-league backtest and calibrated probabilities; flagged players were signed 1.7× more often, measured forward.

Education

MSc Data Science & Society (Business Track) — Tilburg University

2023 – 2024

BSc Economics — Tilburg University

2020 – 2023

Entrepreneurial & Languages

- Malibú Events — founded and ran a fully registered events company; 3,000+ attendees in year one.
- English (native), Spanish (native), Dutch (intermediate).
