Cargill ADE — Recruitment

Re: Associate Data Engineer — Bioindustrial (Gouda)

Tilburg, 10 August 2026

I'm applying for the Associate Data Engineer role. The honest shape of my profile: I'm an analyst who builds his own data infrastructure. At Netvice I built the full path from source to decision — telephony webhooks and REST APIs ingested into PostgreSQL, transformed into KPI stores, served to real-time dashboards used daily on the operations floor. My own SaaS, Citania, runs on PostgreSQL schemas I designed, with database-level constraint guarantees and 294 automated tests.

Against your qualifications: relational databases and SQL are where I live day to day — my production work runs on PostgreSQL, and joins, indexing and schema trade-offs are things I can explain from my own designs. Snowflake, medallion architecture and Airflow I know at the concept level, not from production — your ad says the rest can be learned, and my track record is exactly that: learning fast enough to ship alone. I'd bring genuine curiosity to the manufacturing environment, and AI-driven delivery is already my daily method.

Practical notes: one year of professional experience; working language English (your ad's requirement), Dutch at A2 and improving; kennismigrant-eligible, and Cargill is a recognised sponsor. Gouda is commutable from Tilburg.

Everything I describe is live and clickable at franciscorau.com — I'd gladly walk through the data layer in a conversation.
