Kramp — Recruitment

Re: Supply Chain Analyst — Utrecht

Tilburg, 10 August 2026

Your ad describes the intersection I already work at: analytics, planning, and business performance. At Netvice I built a forecasting model that converts the planned outbound calendar into exact staffing capacity for any future day — 500+ days ahead — including detection of capacity chokes and an optimizer that re-splits batches around them. Forecast accuracy and planning adherence weren't abstract KPIs for me; they decided whether the floor ran short-staffed. I also built the real-time dashboards that gave managers transparency and control, which is the second half of what your Supply Chain Excellence team does.

On your requirements: completed MSc (Data Science & Society, Tilburg) with one year of professional analytics experience — at the junior end of your 1–4 band, but with unusually broad ownership: every system I shipped began as my own proposal. Tools: my dashboards are custom-built in code on PostgreSQL rather than Tableau or Power BI, and my Python work lives in analysis projects (a 10,605-business market study, statistical modelling) — the portfolio at franciscorau.com shows all of it live. I learn new tools fast and enjoy doing so.

Practical notes, honestly stated: my Dutch is A2 and improving; my working language is English — a fit for your international team across the Netherlands and Poland. I hold a kennismigrant-eligible profile and Kramp is a recognised sponsor. Utrecht works well for me.

I'd gladly walk through the forecasting model in a conversation — it is the exact shape of problem your team solves.

Ik verheug me erop kennis te maken — en ik doe mijn best om dat gesprek deels in het Nederlands te voeren.

Francisco Rau
